University of Pittsburgh | Library System

Then & Now

- June of 2020: began full digital preservation for archival data.
- Desire to centralize the digital assets it stewards across diverse repositories

- March 2023: Moved from multitenancy subscription to private cloud
  - Opened up possibilities for centralizing assets

1st step on our path

Exporting Archival Quality Assets from Islandora

+

Customized Ingest into Preservica

ULS Digital Preservation Standards- Arrangement

- Digital Archives designed as storage location

- Arrangement reflects ArchiveSpace finding aid

- All processing completed manually

Ingest Processing: Accelerated Success

- Preservica value-add service for large/complex work

- Can we build a open tool?
  - BagIt to OPEX/PAX

- Help the client "do things", not "make tools"

Ingest Processing: Accelerated Success

- Will do anything, but won't do *that* (56+TB over 260+ collections)
  - (That's about a year of part-time work)

- Preservica provided the tool for our in-house use

- **Lesson Learned:**
  - The answer is always "I don't know"
  - Configuration over code

University of Pittsburgh | Library System

Ingest Processing: Accelerated Success

- High touch export and babysitting
  - Coordinate with digital collections specialists
  - Manual export execution and error review
  - Manual transformation execution and error review

- Rate throttling: 500 GB / ingest, 750 GB / day.
  - But Preservica handles this for us (mostly)!

Islandora Collections- Post-Ingest Processing

- Identify archival collection represented by group
    - Assets arrive showing Islandora collection identification number
    - Arrchival Collection Number may be in metadata
- Not all Islandora collections come from archival collections
- Some Islandora collections contain multiple archival collections
    - Separate collections if multiple in group

Ingest Verification

- (Dis)trust and verify
  - Did we capture all the in-scope objects in Islandora?
  - Did the transformation from BagIt to OPEX/PAX capture all components?
  - Did the Preservica fully ingest the OPEX/PAX?
 - Does Preservica have what Islandora had?

University of Pittsburgh | Library System

Ingest Verification

- Did we capture all the in-scope objects in Islandora?
- BagIt exports:
  - A manifest including SHA1 checksums
  - Metadata files
  - Digital object files
- We enumerate each digital object file and mark it as exported in the source Islandora system, with the timestamp of processing

Object Files Marked Exported

Islandora → Export → BagIt → Manifest → Object File

University of Pittsburgh | Library System

Ingest Verification

- Did the transformation from BagIt to OPEX/PAX capture all components?

- Implicit trust in the transformation script from Preservica

- Passthrough of SHA1 hashes

BagIt → Manifest → Object File

Checksum

Transform

PAX

Ingest Verification

- Did the Preservica fully ingest the OPEX/PAX?
- Implicit trust in the ingest process from Preservica
- Processing of OPEX/PAX
Ingest Verification

- Does Preservica have what Islandora had?

- Preservica Ingest Report

- Post-processing for Islandora

- **Blind spot:** complex components
  - Accommodation: count the children
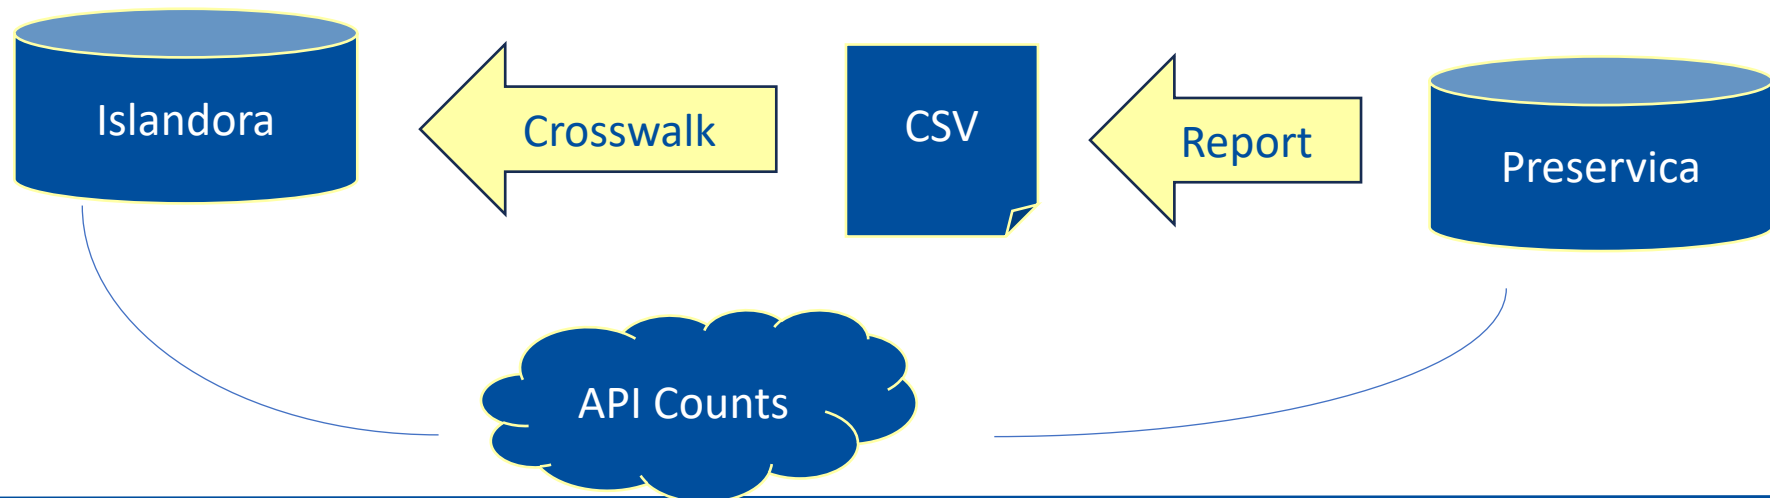

Ingest Verification

Forward Progress

- Consistency in file names terrific assist in bulk options

- Availability of info in preservation description field great for assisting with comparing assets to FA and identifying individual assets when needed

- Available metadata on scans means faster creation of DC tags that can be used for each collection

Thank you
